If *you* use more, *you* will be charged for the usage outside of *your* monthly included value, in addition to *your minimum monthly payment*.

4 HOW DO WE CALCULATE CALL CHARGES?

4.1 How do we calculate the cost of a call?

- (a) We measure the length of each call from the time the call is answered to the time the call is finished.
- (b) The length is then rounded up according to the billing interval indicated in the *pricing table* for *your pricing plan*. For example, if *your* billing interval is 60 seconds, we will round the *call* length up to the next whole 60 seconds. This length is then multiplied by the *call* charge associated with that *call* type, as indicated in the *pricing tables*.
- (c) Some *calls* incur a *flagfall* when the *call* is connected. *Flagfall* rates are indicated in the *pricing tables*.
- (d) The total cost of (b) and (c) above is then rounded up to the nearest cent to determine the final charge for the *call*.

4.2 How do we calculate the time of *your* call?

- (a) To calculate the time of a call we will use the local time recorded at the carrier exchange through which *your* call initially passes.

4.3 How do we calculate charges for data services?

- (a) We will charge *you* for the volume of data uploaded and downloaded through your service connection.
- (b) Charges are based upon 1 kilobyte increments and are rounded to the nearest cent.
- (c) The number of kilobytes used is then multiplied by the appropriate charge set out in the *pricing tables*.

- (d) If *you* have a data subscription plan, *you* will be charged each month according to the subscription monthly fee. If *you* use more data than the amount included in the subscription, *you* will be charged for additional data usage as per the charges set out in the *pricing tables*.

4.4 Types of calls

- (a) **Local Calls** – voice calls to other active landlines within the same Area Code prefix.
